BLUEBERRY

(Vaccinium corymbosum)

**All our mother microcuttings are proved to be virus-free according to laboratory examination.
 We conduct genetic comparative tests for variety genuineness.**

The blueberry plants are very well rooted, hardened off and well-branched from the very plant shoot. Bushes are produced by the micro-cutting method developed in our nursery. Frost hardiness follows Brazelton 2000.

PATIO BLUEBERRIES

(Vaccinium corymbosum x Vaccinium angustifolium)

Varieties produced under license: Aino^{PBR}, Alvar^{PBR}, Arto^{PBR}, Jorma^{PBR}

The most important feature of Patio Blueberries is high frost resistance - they can be easily grown on terraces and balconies.

These plants can survive winter in a container if properly protected, however it is recommended to keep them in a cold garage or basement. Very abundant fructification and compact form - grow up to about 1,5 m high are the unique properties of Pation Blueberries. The size of fruits differs depending on the variety and ranges from 1 to 1,5 cm. The material in the varieties Aino, Alvar, Arto, Jorma is offered exclusively and covered by Natural Resources Institute Finland (LUKE) breeder's license. The price includes a license fee 0,33 EUR

GREEN GIANTS RHODODENDRON COLLECTION

"Green Giants" is a new series of rhododendrons by Swedish breeder Bengt Karlsson, characterized by spectacular, enormous leaves resembling those of exotic rhododendrons. The leaves can reach up to 30 cm in length and about 10 cm in width. They are dark green and either glossy or matte. These plants are the result of crossing exotic species with large leaves and species with very high frost resistance. Laboratory tests have shown that they can withstand temperatures ranging from -20°C to -22°C. In outdoor conditions, they survived the lowest recorded temperature of -18°C. The flowers of the varieties in this series are very impressive. The shrubs begin flowering at a later age, as several-year-old specimens.

Cinnamon Princess

NOVELTY!

(*R. campanulatum* x *R. rex*)

The variety of rhododendron belongs to the new series called Green Giants. It was bred in Sweden by Bengt Karlsson. This variety is a result of crossing the species *Rhododendron campanulatum*, known for its large, oval leaves and good frost resistance, with *Rhododendron rex*, a species with low frost resistance but enormous leaves. Cinnamon Princess is characterized by spectacular leaves of enormous size, reaching up to 28 cm in length and 10-11 cm in width. The average leaf measures 20 cm by 9 cm. The leaves are dark green, very glossy, and have distinctive ribbing. The underside of the leaf has a cinnamon color. Laboratory frost resistance tests have shown that it can withstand temperature drops to -20°C without damage. In the ground, it has survived winters with temperatures as low as -18°C. The flowers are bell-shaped, large, pale pink, with dark brown insides. Blooming is not abundant and may not occur every year. However, this variety is exceptionally attractive due to its spectacularly sized foliage. The shrubs are vigorous and grow strongly. It is estimated that after 10 years, they can reach up to 2.2 m in height and width.

Bengt's Fortuna

NOVELTY!

(*R. fortunei* x *R. ungerii*) x *R. hemsleyanum*)

The rhododendron variety belongs to the new series of Green Giants. It was bred in Sweden by Bengt Karlsson. This variety is a result of crossing three species with large leaves. Bengt's Fortuna is characterized by spectacularly large leaves, reaching up to 25 cm in length and 10 cm in width. The average leaf measures 20 cm by 9 cm. The leaves are light green and matte. The flower buds and leaf stalks have an intense purple color. Laboratory frost resistance tests have shown that it can withstand temperature drops to -22°C without damage. In the ground, it has survived winters with temperatures as low as -18°C. The flowers are large, creamy, and slightly fragrant. The shrubs have good vigor and grow very strongly. It is estimated that after 10 years, they can reach up to 2.5 m in height and width.

King Size

NOVELTY!

(*R. brachycarpum* x *R. macabeum*) x *R. macabeum*

The rhododendron variety belongs to the new series of Green Giants. It was bred in Sweden by Bengt Karlsson. This variety is the result of crossing the highly frost-resistant *Rhododendron brachycarpum* with *Rhododendron macabeum*, a species with low frost resistance but enormous leaves. The *Rhododendron King Size* is characterized by spectacularly large leaves, reaching up to 30 cm in length and 13 cm in width. The average leaf measures 20 cm by 10 cm. The leaves are dark green, very glossy, with distinctive ribbing and a slight white coating (indumentum). Laboratory frost resistance tests have shown that it can withstand temperature drops to -20°C without damage. In the ground, it has survived winters with temperatures as low as -18°C. The flowers are bell-shaped, large, creamy, with dark brown insides. Blooming is not abundant and may not occur every year. However, this variety is exceptionally attractive due to its spectacularly sized foliage. The shrubs are vigorous and grow very strongly. It is estimated that after 10 years, they can reach up to 2.5 m in height and width.

Queen Size

NOVELTY!

(*R. brachycarpum* x *R. macabeum*)

The rhododendron variety belongs to the new series of Green Giants. It was bred in Sweden by Bengt Karlsson. This variety is the result of crossing the highly frost-resistant *Rhododendron brachycarpum* with *Rhododendron macabeum*, a species with low frost resistance but enormous leaves. The *Rhododendron Queen Size* is characterized by spectacularly large leaves, reaching up to 25 cm in length and 10-11 cm in width. The average leaf measures 20 cm by 9 cm. The leaves are dark green, very glossy, with distinctive ribbing and a slight white coating (indumentum). Laboratory frost resistance tests have shown that it can withstand temperature drops to -22°C without damage. In the ground, it has survived winters with temperatures as low as -18°C. The flowers are bell-shaped, large, creamy, with dark brown insides. Blooming is not abundant and may not occur every year. However, this variety is exceptionally attractive due to its spectacularly sized foliage. The shrubs have good vigor and grow strongly. It is estimated that after 10 years, they can reach up to 2.2 m in height and width.

THREE NOBLE WOMEN RHODODENDRON COLLECTION

This is a new series of three late-flowering varieties (at the end of May) with a purple color palette. All of them are characterized by good vigor, a dense habit, and excellent winter hardiness – they are not only frost-resistant (down to -28°C) but also adapted to changing climates, particularly to long warm periods during winter and severe frosts in early spring. They produce abundant flower buds and are easy to cultivate. The series is named after three well-known Polish women from noble families

5/exII	20-30	5	9,52

Variety	Flower color	
Anna Jagiellonka (Peter Alan x Catawbiense Grandiflorum)	violet	NOVELTY!
A Polish variety with deep purple flowers and delicate greenish speckling. It blooms late (at the end of May). The leaves are light green. It has an upright habit and grows fairly vigorously. The plant blooms profusely. It is frost-resistant down to -28°C and has excellent winter hardiness, being well-adapted to the changing climate.		
Izabela Czartoryska (Peter Alan x Burgundula)	dark violet with yellow eye	NOVELTY!
A Polish variety with dark violet purple flowers and a yellow eye. It blooms late (at the end of May). The leaves are light green. It has a dense habit and grows fairly vigorously. The plant blooms profusely. It is frost-resistant down to -26°C.		
Jadwiga Zamoyska (Peter Alan x Catawbiense Grandiflorum)	violet with brown eye	NOVELTY!
A Polish variety with purple flowers featuring a large brown eye. It blooms late (at the end of May). The leaves are light green. It has a dense habit and grows fairly vigorously. The plant blooms profusely. It is frost-resistant down to -28°C and has excellent winter hardiness, being well-adapted to the changing climate.		

CZECH RHODODENDRON COLLECTION

The varieties included in the Czech Collection were bred at the Silva Tarouca Institute for Landscape and Ornamental Gardens, v.v.i., Průhonice, Czech Republic. They are distinguished by their exceptionally attractive flower colors and very abundant and long blooming. Some varieties are additionally characterized by their particularly durable, compact inflorescences that can flower for over 3 weeks. There are some that are super tough in the sun and drought, have nice-smelling flowers, or bright red growth. Most can handle cold down to -24°C. All of them are the result of many years of breeding work and very rigorous selection, which has resulted in varieties with particularly attractive habit and foliage and good resistance to disease.

Variety	Flower color
Bečov - hybrid (Cornelia Schröder × Petr) Purple pink flowers, gathered in a round inflorescences are 8 cm wide. The edges of each petal are curled and dark red. Leaves are big and glossy. In 10 years shrubs are 1,4 m (height) and 1,6 m (wide). Flowering from early May. Frost resistance up to - 24°C.	purple pink
Bezděz - <i>R. ponticum</i> - hybrid (<i>R. ponticum</i> × Cunningham's White) Flowers are 7 cm wide in flat trusses, pale purple with yellow markings. Leaves glossy and very dark green. Size of the shrub is 1,2 m (height) × 1,3 m (width) in 10 years. Flowering time is early to mid May, but reliably and often much more strongly in August to October. Hardy variety up to -24°C. Plants with 1-2 flower buds.	light violet
Bouзов - <i>R. calophytum</i> - hybrid (<i>R. calophytum</i> × Arnošt Silva Tarouca) Light purple flowers (8 cm wide) with dark purple-red dots are gathered in a round inflorescences. Flower buds are red. Compact and regular habit of the shrub. In 10 years shrubs are 1,1 m (height and wide). Flowering mid April to early May. Frost resistance up to -24°C.	pale purple
Čerchov - hybrid (Vranov × Cynthia) Flowers 7–8 cm in diameter, gathered in domed inflorescences, ranging from pure to dark red with a few black-red spots. Leaves are matte to slightly glossy. Plants are vigorous, medium to large shrubs. Blooms in mid-May. Frost-resistant to -20 °C.	dark red NOVELTY!
Děvín^{PBR} - hybrid (Saba × Sarasate) Breeder: Michal Severa Buds are showy bicoloured – strong red purple with light purple margins. Flowers are 8 cm wide in domed trusses, bicoloured light and deep red purple with big red eye. Flowers are strong scented. Very floriferous variety. Leaves are slightly glossy. Plants are regularly compact, height and width of the shrub is 1,1 m in 10 years. Flowering time is late May to early June. Frost resistance up to -24°C (at least).	pink purple
Hostýn^{PBR} - hybrid [(Arthur Stevens × Humboldt) × Madame Jules Porgès] Breeder: Michal Severa Light purple flowers with large colourful dot are gathered in conical inflorescences. Dark green leaves are slightly waved and glossy. In 10 years shrubs are 1,6 m (height) and 1,4 m (wide). Flowering from mid May. Frost resistance up to - 24°C.	light purple
Ještěd^{PBR} - hybrid (Vilém Heckel × Madame Jules Porgès) Breeder: Michal Severa Flowers are 9 cm wide in conical trusses, flowers are purplish red, quite lighter in the centre, and with dark red blotch. Leaves are dark green, glossy. Strong growth, shrubs are 1,4 m (height) × 1,6 m (width) in 10 years. Flowering time is late - end May to mid June. Hardy variety to -24°C. Plants with 1 or 2 flower buds.	pink purple
Karlštejn - hybrid (Arthur Stevens × Bohumil Kavka) Flowers are 8 cm wide, durable and in domed trusses, light purplish pink with darker edges and dark red blotch. Leaves glossy. Size of the shrub is 1,1 m (height) × 1,2 m (width) in 10 years. Flowering time is early to mid May. Hardy variety up to -24°C.	pale pink

Variety	Flower color	
Klenová - hybrid (Spätlease × Bohumil Kavka) Flowers are 8 cm wide in domed trusses, strong purple with light yellow centre and many dark red spots all over the corolla. Leaves narrow and glossy. Young shoots are intense red. Size of the shrub is 1,6 m (height) × 1,4 m (width) in 10 years. Flowering time is late May to early June. Hardy variety up to -24°C. Plant with 1 or more flower buds.	purple	
Klíč - hybrid (Reifrock × Claudine) Breeder: Michal Severa Purple pink flowers with amber dot are 7 cm wide. Dark green glossy leaves. Mid growing variety - size of 7 years old shrub is 70 cm (height) and 50 cm (width). Flowering mid to late May. Frost resistance up to -20°C.	purple pink	
Klínovec - hybrid (Stožec × Bouzov) The flowers, 9 cm wide, are gathered in rounded clusters and are light pinkish-purple with a cherry-red blotch. They are strongly fragrant. The leaves are slightly glossy. Young, emerging shoots and leaves are dark red. Blooming begins in mid-May. The variety is frost-resistant down to -22°C.	light pink violet	NOVELTY!
Koda - <i>R. fortunei</i> - hybrid (Konsonanz × Spätlease) Breeder: Michal Severa Large (approx. 9 cm wide) flowers are gathered in a round inflorescences. At the start of bloom flowers are intensively light pink but they turn white with dark red dots. The edges of petals are gently curled. Leaves are dark green and glossy. Compact and round habit. In 10 years shrubs are 1,1 m (height and wide). Flowering from mid May. Sun exposure and heat are well tolerated. Frost resistance up to -18°C.	white	
Kokořín - <i>R. yakushmanum</i> - hybrid (Blurettia × Bohumil Kavka) Flowers are 7,5 cm wide in domed trusses, reddish purple with white centre and a few dark spots. Leaves matt. The flowers are very long-lasting. Flower buds are purple during the winter. Size of the shrub is 1,2 m (height) × 1,3 m (width) in 10 years. Flowering time is mid to late May. Hardy variety up to -24°C (at least).	purple	
Kotnov - hybrid (Profesor Scholz × Petr) Flowers with a diameter of 7 cm, gathered in spherical inflorescences. Young flowers have light pink edges and a creamy yellow center. The flowers are very durable. The buds are two-colored, yellow and red, during the winter. After 10 years, the shrub reaches 1.4 m in height and 1.6 m in width. Flowering period from mid to late May. A variety that is more tolerant of heat and sun. Frost resistance at least -24°C. Plants with 1 or more flower buds.	light pink	
Kozakov ^{PBR} - hybrid (Bambola × Madame Jules Porgès) Breeder: Michal Severa Large flowers, up to 9 cm in diameter, gathered in spherical inflorescences, purple-pink with a large orange-red spot. The leaves are dark green and glossy. The buds are red-purple in winter. After 10 years, the shrub reaches 1.1 m in height and width. It blooms from mid-May. Frost resistance up to -24°C.	purple pink	
Krakovec - <i>R. insignie</i> - hybrid (Sammetglut × Berliner Liebe) Flowers are 6 cm wide in domed trusses, deep red with white centre and a few dark red spots. Leaves are thick and glossy. Height and width of the shrub is 1,2 m in 10 years. Flowering time is mid to late May. Hardy variety up to -24°C. Plant with 1 or more flower buds.	dark red	
Libin ^{PBR} - hybrid (Hachmann's Mercator × Genoveva) Flowers are 8,5 cm wide in domed trusses, flowers are pale purple with dark reddish purple blotch. Leaves are mid green, glossy. Middle growth, shrubs are 0,8 m (height) × 0,7 m (width) in 7 years. Flowering time is beginning to mid of May. Hardy variety up to -24°C (at least).	pale purple	
Lipnice - hybrid (Sammetglut × Petr) Flowers with a diameter of 6 cm, gathered in spherical inflorescences, dark pink petals with wavy edges. The flowers are very durable. The leaves are thick and glossy. The shrub reaches a height of up to 1.6 m after 10 years. Flowering time from mid-May. Plants with 1-2 or more flower buds. Frost resistance to at least -24°C.	purplish red	
Lovoš - hybrid (Hachmann's Belona × Admiral Vanessa) Flowers are 8 cm wide in domed trusses. At the start of bloom flowers are intensively purplish red with dark red dots. Strong growing shrub. Height 1,3 m and width 1,5 m of the shrub is in 10 years. Flowering time is beginning to mid of May. Hardy variety up to -24°C	purplish red	
Orlik - hybrid (Profesor Scholz × Blue Peter) Flowers 6 cm in diameter, gathered in domed inflorescences, pale yellow with brownish-red spots. Leaves are glossy. Grows to about 1.2 m in height and 1.5 m in width after 10 years. Blooms from early to mid-May. Frost-resistant to at least -24 °C.	pale yellow	NOVELTY!

Variety	Flower color
Praděd - hybrid (Profesor Scholz x Petr) x (Profesor Scholz x Petr) Flowers are 8 cm wide in domed trusses, light yellow with salmon pink shades and few yellow spots. Leaves dark green shiny. Flower buds are covered with tomentum during the winter. After 10 years, the shrubs reach 1.2 m in height and 1.4 m in width. It blooms from late April to mid-May. The flowers are fragrant. Frost resistance up to -24°C. Some plants may not have flower buds.	light yellow
Ralsko - <i>R. fortunei</i> - hybrid (Konsonanz x Spätlese) Breeder: Michal Severa Flowers are up to 8,5 cm wide in domed trusses, light pink with light yellow centre and lots of dark red spots. No stamens. Leaves light green, glossy. Strong growing and fairly compact plant. Shrubs are compact, 1,3 m (height and width) in 10 years. Flowering time is mid May. Hardy variety up to -24°C. Heat and sun tolerant variety.	light pink
Říp^{PBR} - <i>R. forrestii</i> - hybrid (Eva x Buketta) Breeder: Michal Severa Flowers are up to 7 cm wide in domed trusses, strong purplish red with dark red markings. Leaves slightly glossy. Very floriferous variety. Low growing shrubs are fairly compact, 0,75 m (height) and 1,3 m (width) in 10 years. Flowering time is mid May. Hardy variety up to -24°C (at least). Heat and sun tolerant variety.	purple
Sokol - hybrid (Děvín x Red Eye) Flowers 7–8 cm in diameter in domed inflorescences, intense purple-red with slightly lighter edges and distinct dark red spots, fragrant. Leaves medium to dark green, glossy. Medium-sized shrubs. Late flowering (from late May to early June). Frost-resistant to at least -24 °C.	purple-red NOVELTY!
Sovinec - hybrid (Nova Zembla x Hachmann's Evelyn) Flowers are 8 cm wide in domed trusses, vivid purplish red with dark red markings. Leaves glossy. Flower buds are red during the winter. Plants are very nice and regularly compact, height and width of the shrub is 1,2 m in 10 years. Flowering time is mid to late May. Hardy variety up to -20°C.	purplish red
Stožec - <i>R. degronianum</i> - hybrid (Claudine x <i>R. degronianum</i> ssp. <i>heptamerum</i> var. <i>hondoense</i>) Breeder: Michal Severa Flowers are 8 cm wide in domed trusses, purplish pink with orange and yellow markings. Leaves are quite short and wide. Middle growing variety, shrubs are 0,9 m (height) and 1,1 m (width) in 10 years. Flowering time is mid May. Hardy variety up to -24°C (at least).	purple pink
Střekov - <i>R. yakushimanum</i> - hybrid (Schneekrone x Bohumil Kavka) Flowers are 7 cm wide in domed trusses, bright purple with darker edges and changing (green-to-red) markings. Leaves matt. Plants are very nice and regularly compact, height and width of the shrub is 1,2 m in 10 years. Flowering time is mid to late May. Hardy variety up to -24°C (at least). Heat and sun tolerant variety.	purple
Studenec - hybrid (Kalamaika x <i>R. molle</i>) A hybrid of rhododendron and azalea (evergreen azaleodendron). The flowers are long-lasting, 8 cm wide, and are gathered in rounded clusters. They are greenish-yellow (with buds having a slight salmon hue) and feature changing spots from orange-red to green. The leaves are glossy. Young growths have striking red bud scales. Blooming begins in mid-May. The variety is frost-resistant down to -22°C.	white NOVELTY!
Švihov - <i>R. wardii</i> - hybrid [(Mrs Anthony Waterer x <i>R. wardii</i>) x (Mrs Anthony Waterer x <i>R. wardii</i>)] Flowers are 6 cm wide in domed trusses and change their colour during the time: young are purplish pink with paler centre and green spots, matured flowers are pale yellow with orange-red markings. Leaves are glossy. Height and width of the shrub is 1,2 m in 10 years. Flowering time is late May to mid June. Hardy variety up to -20°C.	purplish pink
Vranov^{PBR} - hybrid (Křivoklát x Claudine) Breeder: Michal Severa Flowers are 7 cm wide in domed trusses, cardinal red (unfading) with white anthers. Leaves are matt. Size of the shrub is 1,2 m (height) x 1,3 m (width) in 10 years. Flowering time is early to mid May. Hardy variety up to -20°C.	red
Vyšehrad^{PBR} - hybrid (Konsonanz x Bluebell) Breeder: Michal Severa Flowers are up to 12 cm wide in domed trusses, flowers are deep purplish pink, lighter in the centre, and with large dark red blotch. Flowers with slight scent. Leaves are dark green, glossy. Robust and strong growing plant. Shrubs are 1,6 m (height) x 1,4 m (width) in 10 years. Flowering time is mid May. Hardy variety up to -24°C. Heat and sun tolerant variety.	dark purple pink NOVELTY!
Zebín^{PBR} - hybrid (James Burchett x Karibia) Breeder: Michal Severa Flowers are 7,5 cm wide in domed trusses, pale yellow, outside with salmon tint, and with orange-yellow markings. Leaves dark green, glossy. The young shoots with roseine red bud scales. Mid growing variety, nice compact shrubs 1 m (height) x 1,3 m (width) in 10 years. Flowering time is mid May. Hardy variety up to -24°C.	yellow

MUSIC RHODODENDRON COLLECTION

Breeder: Piotr Muras

The names of the varieties of this collection (i.e. **'Fryderyk'**^{PBR}, **'George Sand'**^{PBR} and **'Polonez Chopina'**^{PBR}) were given to commemorate the great composer Fryderyk Chopin. They were created as a result of breeding works initiated by Dr Piotr Muras in the 1990s. The shrubs included in this collection are **low or medium sized, with a compact, oval shape, dense, dark green foliage and a large number of shoots.** They distinguished by **early blooming, good frost resistance (about -24°C), resistance to drought and full sunshine.**

These varieties are legally protected by COBORU in Poland.

They are registered in The International Rhododendron Register & Checklist (2004).

**KOLEKCJA
MUZYCZNA**

---------	--------------

Fryderyk^{PBR}

salmon pink

(Belkanto x *R. aureum*)

(P. Muras 2012)

Low bush with an oval, slightly flattened habit. Leaves are dark green, slightly glossy. In 10 years grows up to 0,5-0,6 m high and 0,8 m wide. Flowers 5-5,5 cm across. Flower buds are salmon pink, in blooming time yellow - cream with a spotted olive green blotch on the upper petal and contrasting dark pink markings. Blooms early, very profusely from the middle of April to the beginning of May (southern Poland). Frost resists about -24°C. (frost zone 6A). Due to small size it is especially recommended for small gardens. Variety legally protected.

George Sand^{PBR}

yellow

(Belkanto x *R. aureum*)

(P. Muras 2012)

Low dense shrub with a ball-shaped habit. In 10 years grows up to 0,5-0,7 m high and similar width. Leaves are dark and slightly shiny. Flowers 5-5,5 cm across, buds are yellow pink, in blooming time lemon yellow with a contrasting greenish yellow mottled spot on the upper petal. Blooms profusely from mid-April (southern Poland). It's a frost hardy variety about -24°C (6A frost zone). Recommended for small gardens. Variety legally protected.

Polonez Chopina^{PBR}

creamy-white

(*R. aureum* x Tomasz Wojciech)

(syn. Polonez) (P. Muras 2013)

A medium sized shrub with rounded habit. In 15 years grows up to 1,1 m high and 1,2 m wide. Leaves are dark green, glossy. Flowers 5,5-6 cm wide. Buds are pink and salmon pink, fully opened cream-white with a delicate fading pink shade and a yellow-green mottled spot on the upper petal. Blooming time from mid-April (southern Poland). Frost hardy variety about -24°C (6A frost zone). Healthy variety recommended for small gardens and parks. It is legally protected.

RHODO ELITE COLLECTION

The shrubs belonging to the group we have named **RHODO ELITA** not only look impressive during the flowering period, but above all stand out for their spectacular foliage throughout most of the summer! They include species, **first- and second-order hybrids, and varieties; all of them have extremely attractive leaves**, especially young growths. In this group, you will find shrubs **with leaves covered with a coating in various shades from silvery to copper-brown**. There are also shrubs whose **underside of the leaf is covered with an exceptionally impressive suede-like lining: silvery or copper**. **Some of the varieties have fantastic colors of young leaves: cream, silvery, blue, or brown-purple**. In some of these varieties, this color persists permanently throughout the season! We therefore remain convinced that the presented varieties and species of this genus fully deserve the name RHODO ELITE. Their frost resistance is not yet fully known, but we can recommend them to you because they have survived all winters since 2007, growing in Central Poland.

Golfer (<i>R. yakushmanum</i> x <i>R. pseudochrysanthum</i>)	pink-white	NOVELTY!	5/exl 14,29
This variety is valued for its exceptionally intense, silvery indumentum (coating) on the upper side of the leaves, as well as its attractive creamy underside. The indumentum is especially prominent on young growths but remains present even through winter in this variety. The shrub has a very dense habit. After 10 years, it reaches approximately 1-1.2 m in height and width. The flowers of Rhododendron 'Golfer' are dark pink in bud, opening to a delicate pink and gradually fading to pure white. It performs well in temperate climates. Frost-resistant down to -24°C			
Hydon Velvet (<i>R. degranianum</i> ssp. <i>yakushmanum</i> x <i>R. bureavii</i>)	white	5/exl 14,29 10/exl 33,10	
Select. Like some other varieties of Rhodo Elite Collection, it has brown, suede indumentum underneath its leaves. They are dark green, elongated, oval. Flowers are white, large, bell-shaped. Slow growing, compact form. Prefers semi-shaded positions. In 10 years reaches 80-120 cm height. Plants may not have flower buds.			
Ken Janeck (select <i>R. degranianum</i> ssp. <i>yakushmanum</i>)	light pink	5/exl 14,29 15/exl 33,10	
Select, bottom side of leaves is covered with cream indumentum. The leaves are elongated, light green. Flowers pale pink with a light brown spot. Slow growing, compact form. Prefers a semi-shaded position. In 10 years reaches 80-120 cm height. Plants may not have flower buds.			
King's Ride (<i>R. insigne</i> x <i>R. degranianum</i> ssp. <i>yakushmanum</i>)	pink	NOVELTY!	5/exl 14,29
It grows as a compact, rounded shrub, reaching only about 0.80 m in height and width after 10 years. The leaves are olive-green and slightly glossy on the top, with a creamy underside and a coppery indumentum on the surface. The flowers of Rhododendron 'King's Ride' are dark pink in bud, opening to a delicate pink. As they bloom, they gradually lighten to pure white. It blooms at the turn of April and May.			
Lem's Form - R. bureavii (<i>R. yakushmanum</i> x <i>R. bureavii</i>)	light pink	5/exl 14,29	
It is characterized by a compact, dense habit. After 10 years, it reaches a height of about 1.2-1.5 meters and a similar width. The upper side of the leaves is dark green and slightly glossy, while the underside is covered with a dense, rusty indumentum, which is characteristic of this variety and adds extra charm. Young growths are covered with a light brown, intense indumentum. The large, funnel-shaped to bell-shaped flowers range from white to pale pink and are gathered in striking, rounded clusters. It is frost-resistant down to about -18°C.			
Little Bear (<i>R. yakushmanum</i> x <i>R. tsariense</i>)	light pink	5/exl 18,57	
Sweedish Primary crossing of rhododendron with oval, small leaves – young shoots are covered with intense tomentum of cinnamon colour, that changes to creamy as time goes by. With suede like, light brown indumentum. Flowers are pale pink. Grows slowly, in 10 years reaches 60-80 cm. Frost resistance of -24°C. Breeder: Bengt Karlsson.			
Lullaby - R. yakushmanum Fantastica x <i>R. dichroanthum</i> ssp. <i>scyphocalyx</i>	orange-salmon	NOVELTY!	5/exl 14,29
It is characterized by a compact, dense, and rounded habit, reaching a height and width of about 0.8-1.2 m. The leaves are intense green and are covered with a silvery indumentum. The undersides of the leaves have an attractive creamy coating. The orange-salmon flowers are funnel-shaped to bell-shaped and are gathered in dense, rounded clusters. They bloom profusely in May, creating a striking cascade of colors. The variety is frost-resistant down to approximately -20°C.			
Lynx (<i>R. yakushmanum</i> x <i>R. bureavii</i>)	light pink	5/exl 18,57	
A top-tier rhododendron hybrid with attractive foliage—young growths are entirely covered with an intense cream-cinnamon indumentum that gradually turns silvery. The leaf coating is also velvety and cinnamon-colored. The indumentum persists on the shrubs throughout the year. The flowers are light pink. The growth habit is dense and upright. After 10 years, it reaches 50-60 cm in height. Frost-resistant to approximately -24°C.			
Maifreude - R. yakushmanum (<i>R. degranianum</i> ssp. <i>yakushmanum</i> var. <i>yakushmanum</i> x <i>Britannia</i>)	dark pink	5/exl 14,29	
Rhododendron from Yakushmanum group with an attractive foliage with violet colour buds and dark pink flowers after blooming. Flowers strong frayed. Leaves mat, light green with tomentum. Grows to medium size, dense habit with numerous of small leaves. Flowering early Spring.			
Makiyak (<i>R. makinoi</i> x <i>R. degranianum</i> ssp. <i>yakushmanum</i>)	light pink	5/exl 14,29	
A compact shrub with a dense habit. It grows to about 1 meter in height and a similar width. It has fairly narrow, dark green leaves with a silvery-white coating on the underside. Young growths are covered with an attractive silvery indumentum. The flowers are dark pink in bud, opening to a delicate pink that gradually lightens to pure white as they bloom. Blooms end of April, beginning of May. The variety is frost-resistant down to approximately -24°C.

Märchenlaub (<i>R. degronianum</i> ssp. <i>yakushmanum</i>) A rhododendron from the Yakushmanum group with attractive foliage – young growths are covered with a delicate, creamy coating (fuzz). The underside of the leaves is light cream in color. The leaves are elongated and the flowers are light pink. The habit is dense. Average growth rate - reaches 80-100 cm after 10 years. Frost resistance around -24°C.	light pink	NOVELTY!	5/exl 14,29
Oberschlesien (<i>R. insigne</i> x <i>R. degronianum</i> ssp. <i>yakushmanum</i>) Primary rhododendron crossing with an attractive foliage – young shoots are covered with a delicate creamy tomentum. Indumentum is light cream coloured. Leaves elongated, dark green, flowers are light pink, darker in the bud. Dense habit. Medium growth. In 10 years reaches 100-120 cm height. Frost resistance -24°C.	light pink		5/exl 14,29
Parsifal (Mars x Direktör E. Hjelm) The variety is distinguished by its large, bell-shaped, red flowers and dense habit. The dark green, elliptical, glossy leaves make it attractive year-round. Young growths are covered with a creamy indumentum. The shrub grows to about 1 m in height.	purple-red	NOVELTY!	5/exl 18,57
Queen Bee (<i>R. degronianum</i> ssp. <i>yakushmanum</i> var. <i>yakushmanum</i> x <i>R. tsariense</i>) The variety features dark green, glossy, oval leaves that are covered underneath with a thick cinnamon-colored coating. Young growths are intensively covered with a coppery indumentum. The flowers are pink in bud, opening to light pink, and gradually turning white as they bloom. After 10 years, it can reach about 1 m in height and width. Frost-resistant down to approximately -22°C.	light pink	NOVELTY!	5/exl 14,29
Rauhreif (<i>R. degronianum</i> ssp. <i>yakushmanum</i> x <i>R. smirnowii</i>) Rhododendron from <i>Yakushmanum</i> group with an attractive foliage – the young shoots covered with silvery tomentum. With suede like, light cream indumentum underneath leaves. Leaves are rather big and oval. Flowers pale pink, slightly frayed. Dense and erected habit. Growth typical for <i>Yakushmanum</i> – in 10 years reaches 80-100 cm. Frost resistance of -24°C.	light pink		5/exl 14,29
Robin - R. bureavii A compact shrub with a medium growth rate. After a few years, it reaches a height of about 1.5 meters. It is characterized by large, leathery, dark green leaves, which are covered with a dense, rusty coating on the underside. Young growths are covered with an intense, coppery indumentum. The flowers range from white to pale pink with delicate, darker spots on the upper petals. It blooms in May. Frost-resistant down to approximately -18°C.	light pink	NOVELTY!	5/exl 14,29
Ruth Davis (<i>R. degronianum</i> ssp. <i>yakushmanum</i> x <i>R. degronianum</i> ssp. <i>heptamerum</i>) Select – primary rhododendron crossing with attractive foliage. Young shoots and buds covered with delicate, creamy tomentum. Indumentum is light cream coloured. Leaves are elongated, dark green, white flowers infundibular, slightly wavy. Medium growth - in 10 years reaches 80-100 cm. Frost resistance approx. -24°C.	white		5/exl 14,29
Silber - R. makinoi A rhododendron variety with distinctive, very narrow and long leaves covered with an intense, silvery indumentum found on young growths. The older leaves contrast with the young ones in a deep, dark green. The habit is compact and dense. After 10 years, it reaches about 1-1.5 m in height and a similar width. The flowers of this variety are pale pink, gradually lightening to white with subtle pink accents. It blooms in May and is frost-resistant down to approximately -20°C.	light pink		5/exl 14,29
Silbervelours - R. pachysanthum A slow-growing variety with a wide and dense habit. After 10 years, it reaches about 1 m height. The leaves are distinguished by a very intense, light brown indumentum on young growths, which decorates the leaves until late autumn. The underside of the leaf is covered with a dense, light brown coating. The flowers are pink in bud, opening to light pink, and gradually lightening to white as they bloom. Frost-resistant down to approximately -23°C.	light pink		5/exl 14,29
Silver Lady (<i>R. degronianum</i> ssp. <i>yakushmanum</i> var. <i>yakushmanum</i> x <i>R. smirnowii</i>) Beautiful variety with delicate flowers, red-pink in bud, pure white after blooming with small yellow spot on the top of petal. Elliptical leaves with silver shadow. Young leaves covered with beautiful tomentum. Grows to medium size, created dense and stocky shrub.	white		5/exl 14,29
Teddy Bear (<i>R. bureavii</i> x <i>R. degronianum</i> ssp. <i>yakushmanum</i>) Select – primary rhododendron crossing with exceptionally attractive foliage. Young shoots covered intensive cream-cinnamon coloured tomentum which remains on the shrub all year long. Older leaves are dark green, glossy. Indumentum of the leaves is copper brown. Flowers are big, pale pink with darker spot. Dense and stocky habit – after 10 years reaches 50-60 cm. Frost resistance of -24°C.	light pink		5/exl 18,57
Viking Silver (<i>R. degronianum</i> ssp. <i>yakushmanum</i>) A variety that attracts attention with both its decorative dark green leaves, which are covered with a strong, silvery indumentum when young and a delicate coating on the underside, as well as its striking flowers. The flowers are pink in bud and gradually lighten to light pink as they open. It reaches a height of about 0.80-1.30 m.	light pink		5/exl 14,29

Yaku Angel (select <i>R. degronianum</i> ssp. <i>yakushmanum</i>)	pink	5/exl	14,29
Select, with unusual attractive foliage – young shoots covered with intensive, silver tomentum. Indumentum of the leaves is light brown. Older leaves are dark green, elongated, rolled up. Flowers are pink in bud, when blooming – white. Dense and wide habit. In 10 years reaches 60-80 cm. Frost resistance down to -26°C.			
Yaku Queen (King Tut x Koichiro Wada)	light pink	5/exl	14,29
Dark green, glossy, elliptical leaves that are covered underneath with a thick, rusty coating. Young growths have a silvery indumentum. The flowers are pink in bud, turning to light pink as they open, and gradually fading to white with a delicate pink hue during blooming. After 10 years, it can reach about 0.9 m in height and 1.2 m in width. Frost-resistance down to approximately -24°C.			
Rh. yakushmanum hybrid x rex	pink	5/exl	14,29
A unique hybrid of Rh. yakushmanum and Rh. rex. It has large, dark green leaves. Young growths are covered with silvery tomentum (fuzz). The underside of the leaves and shoots are covered with dense, creamy padding. These features give the plant an exotic appearance. It blooms in pink. Medium-strong growth – after 10 years it can reach 1.5 m in height. Frost resistance has been slightly increased compared to Rh. rex and is around -20°C.			

Variety	Flower color	Symbol	Price [EUR]
		*average exchange rate 4.20	
BRAVA DIVA	NOVELTY!	5/exl	18,57
		15/exl	41,90

The trade name for seedlings of a rhododendron hybrid (*bureavii* x *pachysanthum*) x (*brachycarpum* x *macabeanum*), belonging to the broader group of exceptional rhododendrons known as **Rhodo Elita**. This group comprises unique rhododendrons with distinctive features, usually possessing attractive indumentum (felt-like covering) on their leaves. **BRAVA DIVA** shrubs are highly varied due to the fact that they are the result of crossing four species with extremely different characteristics. They have in their lineage species with strong indumentum (*bureavii* x *pachysanthum*), a species with high frost resistance (*brachycarpum*), and a species with large leaves (*macabeanum*). Rhododendrons of the **BRAVA DIVA** variety can have different colors of indumentum on their leaves, ranging from cream-white to silver to copper. Some plants have a more intense covering, while others have less. They also differ significantly in growth vigor as well as in the shape and size of their leaves. **BRAVA DIVA rhododendrons are unique items. Bred by Bengt Karlsson.** Laboratory frost resistance tests have shown that they can withstand temperature drops down to -22°C without damage. So far, they have survived winters with temperatures as low as -18°C in the ground.

SPECIES

Variety	Flower color	Symbol	Price [EUR]
*average exchange rate 4.20			
<i>Rh. bhutanense</i>	pink	5/exl	18,57
A very rare species of rhododendron with pink, bell-shaped flowers. The leaves are leathery, densely covered with reddish-brown pubescence on the underside. Young growths are covered with a creamy tomentum (fuzz), which is decorative throughout the year. The shrub grows slowly, reaching a height of about 1 m in 10 years. It requires protection during winter. Frost resistance to about -18 °C.			
<i>Rh. campanulatum ssp. aeruginosum</i>	pink	5/exl	18,57
A rare species of rhododendron with unique foliage – young growths are glossy and have a metallic blue hue. Flowers are pink. Grows slowly – reaches approx. 150 cm in height after 10 years of cultivation. May freeze in cold winters. Frost resistance to -20°C.			
<i>Rh. campanulatum x sanguineum var. haemaleum</i>	red	5/exl	18,57
A very unusual rhododendron hybrid. Very dense, compact habit. Small, dark green leaves. After 10 years, it reaches a height of approx. 1-1.3 m. Other characteristics are not yet known.			
<i>Rh. campylogynum subsp. myrtilloides</i>	pink-purple	5/exl	18,57
A miniature rhododendron with very small leaves and a dense, compact habit. After 10 years, it forms a cushion about 30 cm high. Bell-shaped, pink-purple flowers. Frost resistance to about -18 °C.			
<i>Rh. clementinae x roxieanum</i>	light pink	5/exl	18,57
An exceptional primary hybrid, extremely rare, recommended for collectors. It has a very dense habit and is characterized by slow growth. After 10 years of cultivation, it reaches about 0.8 m in height. The leaves are narrow and pointed, with older leaves being dark green and new growths light green. The flowers are light pink, and blooming is not abundant. Frost resistance down to around -24°C. Breeder - Bengt Karlsson.			
<i>Rh. flinckii</i> syn. (<i>R. lanatum</i>)	yellow	5/exl	14,29
A very rare species of rhododendron with slow growth and fairly small leaves covered with brown tomentum. Older leaves have a bluish glow. The underside of the leaves is covered with dense, rust-colored tomentum. The flowers are bell-shaped and yellow. After 10 years, this variety reaches a height of about 1.3 m. It prefers semi-shaded locations sheltered from the wind. Frost resistance to about -18 °C.			
<i>Rh. haematodes</i>		5/exl	14,29
A species of rhododendron with intense red, funnel-shaped flowers with darker spots. The leaves are dark green, glossy, and oval. The plant grows fairly slowly, reaching a height of about 1.2 m in 10 years. It thrives best in partial shade, in locations sheltered from cold winds. Frost resistance to about -18 °C.			
<i>Rh. orbiculare x platypodum</i>	pink	5/exl	18,57
This hybrid combines the best traits of both species, offering beautiful flowers and attractive dark green, oval leaves. The flowers are typically pink or pink-purple and may vary in shade depending on the dominant parental traits. It grows to a height of about 1.5 meters and reaches a similar width, forming a compact and well-branched shrub. It is frost-resistant down to approximately -23°C.			
<i>Rh. platypodum</i>	pink	5/exl	14,29
A rare species of rhododendron with large, bell-shaped, pink flowers, gathered in impressive inflorescences, appearing abundantly in spring. The leaves are large and round, which is an unusual shape among rhododendrons. The shrub grows moderately vigorously, reaching a height of about 1.3-1.5 m within 10 years. Frost resistance to about -18 °C.			
<i>Rh. pachysanthum</i>	white	5/exl	14,29
A species native to Taiwan, where it naturally grows at elevations of 2,000 to 3,200 m. It is valued for its exceptionally intense cream-colored indumentum on the leaves, which darkens to a bronze-brown over time. The undersides of the leaves are covered with a dense, silvery coating. The flowers are light pink in bud, turning to pure white as they open. Frost-resistance from -18 to -23°C.			
<i>Rh. phaeochrysum</i>	creamy yellow	5/exl	14,29
An original species of rhododendron with creamy yellow, funnel-shaped flowers, often with delicate, darker spots. The leaves are narrow and pointed. It grows slowly, reaching a height of about 1.3 m in 10 years. It thrives best in semi-shaded locations, sheltered from the wind. Frost resistance to about -18 °C.			
<i>Rh. pseudochrysanthum</i>	white	5/exl	14,29
This species originates from the mountainous regions of Taiwan. It features the most attractive and intense indumentum among rhododendrons, with a remarkable silvery-white color, especially noticeable on young growths but remaining on the plant until late autumn. The leaves, with their distinctive heart-shaped form, are covered underneath with a dense, creamy indumentum. The flowers are initially light pink and turn white, with a bell-like shape. Frost-resistance down to approximately -22°C.			
<i>Rh. taliense</i>	light pink with an eye	5/exl	18,57
Rhododendron taliense is a species of rhododendron native to the mountainous regions of Asia, particularly from Chinese provinces like Yunnan. This exceptionally beautiful shrub reaches a height of about 1.5 meters after 10 years. Its main ornamental feature is the dark green, leathery leaves, which are covered on the underside with a dense, rusty-colored indumentum, giving the plant its characteristic appearance. The leaves are relatively narrow and sharply pointed. The flowers are light pink with a brown spot. It blooms profusely and reliably. This species is well-suited to Polish climatic conditions. Cold hardiness is around -26°C. Breeder: Bengt Karlsson			

Variety	Flower color	Symbol	Price [EUR]
*average exchange rate 4.20			
<i>Rh. wasonii</i>	creamy white	5/exl	18,57
A botanical species naturally occurring in the Sichuan Mountains in China. Creamy white flowers with a delicate red spot. Blooms in May. It has attractive foliage – the underside of the leaves is covered with copper-brown tomentum, and the upper side is dark green with delicate copper hairs. It grows slowly – after 10 years it reaches 50–60 cm in height. Compact and low habit. Frost resistance to –24°C.			
<i>Rh. wightii</i>	yellow-cream	5/exl	18,57
It is an interesting and little-known species of rhododendron that originates from the mountainous regions of India and Nepal. It is characterized by large, yellow-cream, funnel-shaped flowers. The dark green, leathery leaves stand out due to their large size and are covered with a delicate indumentum on the underside. After 10 years, it reaches a height of about 1.5 meters. Cold hardiness is around -18°C.			
<i>Rh. wiltonii</i>	white-pink	5/exl	18,57
A botanical species occurring naturally in mountain, Sichuan, China. White pink flowers with darker spot. Blooms in May. It has attractive foliage- the underside of the leaves is cinnamon and the top side is leathery, intense dark green with fine tomentum. Young shoots are creamy and contrast with the dark green of older leaves. It grows slowly – size after 10 years is 50 cm height. Dense and squat habit. Frost resistance -24°C. The name of the shrub was given to commemorate Sir Colville E. Wilton.			
<i>Rh. yakushmanum x Rh. adenopodum</i>	white	5/exl	18,57
A unique primary crossed hybrid, extremely rare and recommended for collectors. It has a dense habit and moderate growth rate, reaching about 1.2 meters in height after 10 years of cultivation. The undersides of the leaves are covered with a coppery indumentum, and young shoots are coated with light brown fuzz. The flowers are light pink in bud and turn white upon opening. It blooms reliably. Cold hardiness is around -24°C. Breeder: Bengt Karlsson.			
<i>Rh. brachycarpum x Rh. auriculatum</i>	light pink	5/exl	18,57
An exceptional first-rate hybrid, extremely rare, recommended for collectors. It has a dense habit and is characterized by vigorous growth. It reaches approximately 1.5 to 2 meters in height after 10 years of cultivation. This hybrid includes one of the most cold-resistant species, <i>Rhododendron brachycarpum</i> (cold hardiness up to -35°C). The leaves of this hybrid are dark green, glossy, very long, and sharply pointed. Young shoots are light green or brownish. The flowers are very large and light pink. Frost resistance is not yet known. Breeder: Bengt Karlsson			

FINNISH RHODODENDRON COLLECTION

Breeder: Kristian Theqvist

Finnish rhododendron collection consists of new varieties, grown in Finland by Kristian Theqvist. They were raised with participation of the strongest rhododendrons, to whom they owe high frost-resistance (between -26°C and -32°C) and attractive colour schemes. They are the perfect fit for cooler climat. The collection is still open, so every year some new varieties will extend it.

Variety	Flower color
---------	--------------

Becca

pink

(Helsinki University x Blue

New Variety of finnish breeding with high frost resistance up to -30°C. Flowers intensely pink with green-brown spot. Loose habit. It grows with medium intensity. At the age of 10 years it reaches the height of 120 cm. Leaves in the type of species brachycarpum - very big, shiny, vivid green.

Eija

pink-white

(Elviira x Blue Bell)

Profusely blooming variety with bicolor flowers, pink outside and white inside with big, light brown spot. Leaves are elliptic, dark green. Very dense, compact and straight form. After 10 years it reaches 1,2 m height. Blooms in May. Frost hardy down to -26°C.

Hehku

orange-yellow

NOVELTY!

(Elsie Maria x Böhmen)

A variety with bright red flower buds that develop into orange flowers. Hehku is a cross between 'Elsie Maria' and 'Böhmen', both of which have the orange-flowering dichroanthum species in their pedigree. The strong leaves have wavy, downward-curving edges. Slow growth, reaching approx. 0.8 m after 10 years. Frost resistance to -26°C.

Kristian's Moonlight

yellow-cream

(P.M.A Tigerstedt x Alli)

A slow-growing variety with a dense, compact habit and unusual foliage. Older leaves are brownish-green and olive-green, contrasting with young, light green growth. The flowers are creamy yellow, large, with a brown-orange spot. At the end of flowering, they change color to light pink. After 10 years, the shrub reaches a height of about 60 cm and a width of about 80 cm. Very high frost resistance to -30°C. Plants with 1-2 or more flower buds.

Kristian's Sunshine

light yellow

NOVELTY!

(Kullervo x Goldprinz)

A Finnish, frost-resistant variety with bright yellow flowers and a delicate burgundy eye on the upper petal. Its high frost resistance (-30°C) and yellow flower color are a unique combination among rhododendrons. It forms a dense, compact shrub with upright shoots, which blooms fully in early spring. Its leaves are oval, leathery, and shiny. It blooms profusely.

Kyllikki

light pink

NOVELTY!

(Helsinki University x Ken Janeck)

Purple-red flower buds open into light pink flowers that gradually fade to white. The flowers are unique, resembling daffodil blooms in shape. This variety grows slowly, reaching about 1 m in size over 10 years. It is highly frost-resistant, with its parentage including 'Helsinki University' and 'Ken Janeck'. Frost resistance at least -28°C.

Lumotar

light pink

(Helsinki University x *R. fortunei*)

A variety with light pink flower buds and fragrant, pure white flowers. Unusual incompact flower crown and stamens partially transformed into petals. Its finnish name means 'Charming Beauty'. Leaves are elliptic, dark green, brighter on the edges. Very straight form, loose. After 10 years it reaches 1,8 m height, and 1,5 m width. Blooms in May. Frost hardy at least down to -26°C.

Merja

pink-orange

(Helsinki University x Böhmen)

It stands out with its red flower buds and unique, pink-orange flowers with yellow-brown spot. Densely leaved variety with dark green, huge, inversely elliptic leaves and compact form. It grows slowly - after 10 years it reaches 80 cm height, and 120cm width. Blooms in May. Frost hardy at least down to -30°C, which is unusual among varieties with that color of flowers. Plant with 1 or more flower buds.

Variety	Flower color
Nikodemus [(<i>R. brachycarpum</i> x <i>R. aureum</i>) x <i>hybr.</i>] A variety with white, semi-full flowers, which are pink before they open. Young increments are light green, older leaves are oval, olive-green. Dense, compact form. It reaches 50 cm height and 80 cm width after 10 years. It blooms early - at the beginning of May. Frost hardy at least down to -26°C.	white, full
Pernilla (Helsinki University x Blue Bell) A variety with pure white flowers with big, light brown spot. Leaves are inversely elliptic, huge, dark green. Medium-strong growth. After 10 years it reaches 1,2 m height. It blooms late, at the end of May. Frost hardy at least down to -26°C.	white with a light brown eye
Ritva (Haaga x <i>R. campanulatum</i>) A variety with sensitive, light pink flowers and pink flower buds. Leaves are oval, dark green. Medium-strong growth - after 10 years reaches 1,4 m height and width. Dense form. It blooms in May. Frost hardy down to approximately -30°C.	light pink
Teuvo (<i>R. brachycarpum</i> ssp. <i>tigerstedtii</i> x <i>R. microgynum</i>) The hybrid <i>rhododendron brachycarpum</i> ssp. <i>tigerstedtii</i> x <i>microgynum</i> results in a dense, low-growing variety with beautiful, vivid purple-red flowers. The leaves are sturdy, with a distinct texture and light brown indumentum on the underside. It has a slow growth rate, reaching about 0.8 meters in height after 10 years. Frost hardy down at least -28°C.	purple-red NOVELTY!

RHODO KISS RHODODENDRON COLLECTION

RHODO KISS

A series of rhododendrons grown in our nursery. Each of the three varieties belonging to the Rhodo Kiss collection has unique characteristics. They all share the same color scheme - the lush colors of the flowers are reminiscent of nature's spring kiss.

---------	--------------

Double Kiss^{PBR}

dark pink, half-full

(Haaga x Mars)

A variety with very rare among rhododendrons, semi-full, deep dark pink flowers. Leaves are dark green, oblong. Dense and straight form. After 10 years it reaches 1,5 m height. Very frost hardy down to -30°C.

Late Kiss^{PBR}

pink

(Mrs Anthony Waterer x Artmeyer's Späte)

Very late blooming rhododendron variety - it blooms in June! Huge, light green and lofty flower buds. Big, pink flowers, with visible, yellow-brown painting. It blooms profusely. Dense, upright form. After 10 years it reaches 1,5 m height. Frost hardy down to -24°C.

Neon Kiss^{PBR}

neon-red

(Haaga x Brisanz)

Hardy variety with very intensive, neon-red flowers. It stands out with its attractive, dense form and dark green leaves. It grows medium-strong. After 10 years it reaches 1,2 m height. Reliable and profuse blooming. Very frost hardy down to -28°C.

35/exll	55-65		54,76

Variety	Flower color
Royal Amaranth / Jan III Sobieski (Haaga x Torero) Flowers of amaranth colour unique for rhododendrons with yellow spot. Slow growing variety with rather small, elongated, dark green leaves, rolled up slightly. Light green buds contrast well with dark green leaves. Frost resistance up to -30°C.	amaranth with yellow spot
Royal Butterfly^{PBR} / Królowa Jadwiga^{PBR} (Haaga x Kabarett) Rosy-white flowers, heavily fringed, with a large red-burgundy eye. Blooms profusely every year. A vigorous variety with green shoots. Tends to bloom partially in autumn. Frost resistant to -30°C.	pink with brown-red spot
Royal Candy / Królowa Bona (Schneewittchen x Cardinal) Variety of subtle, sugary-pink flowers brighter inside of the flower. Growth - slow; habit - compact. Stems - thick and rigid; leaves - wide and dark green. Finnish varieties were not used in the crossing. The variety is characterized by high frost resistance and abundant flowering. Frost resistance up to -30°C.	sugary-pink <i>Rh. yakushmanum</i>
Royal Lilac^{PBR} / Bolesław Chrobry^{PBR} (Helliki x Rasputin) Purple flowers with a delicate, brown spot. This variety grows intensively and has a dense habit. Elongated leaves, turned up slightly. Frost resistance up to -30°C.	violet with light brown spot
Royal Red^{PBR} / Władysław Jagiełło^{PBR} (Schneewittchen x Cardinal) Intensively red flowers, composing big, impressive inflorescence. Grows with moderate intensity, has compact habit. Leaves are dark green, elongated, shoots thick and dark brown. Finnish varieties were not used in the crossing. The variety is characterized by high frost resistance and abundant flowering. Frost resistance up to -30°C.	red
Royal Rosy^{PBR} / Władysław Łokietek^{PBR} (Helliki x Koichiro Wada) Light pink, brighter inside flowers with wavy petals. The variety grows typically for yakushmanum group. Leaves are dark green, habit dense and compact. It's distinguished by attractive silvery tomentose on young leaves which gets rubbed away with time and brown, soft tomentose at the bottom of the leaves. Frost resistance up to -30°C.	pink <i>Rh. yakushmanum</i>
Royal Scarlet / Kazimierz Wielki (Cardinal x Helsinki University) Variety of red flowers with a yellow-brown spot. It grows with medium intensity. Shoots are thick, firm and brown-red. Leaves dark green and elongated. Buds light brown. Frost resistance up to -30°C.	red with yellow-brown spot
Royal Violet^{PBR} / Kazimierz Odnowiciel^{PBR} (Rasputin x Helsinki University) Very big, wide open, pink flowers. Almost white centre of the flower with a big, light brown spot. The most intensively growing variety of all new ones comparable to the variety 'Catawbiense Grandiflorum'. Dense plant habit and oval, shiny leaves. Frost resistance up to -30°C.	pink with light brown spot

Anna's Platinum ^{PBR}	violet	5/exl	17,85
		15/exl	29,76

The variety was found in our nursery as a spontaneous mutation of the 'Catawbiense Boursault' rhododendron. The original form - 'Catawbiense Boursault' - is characterized by great vigor and strong growth. After 10 years, it can reach approx. 3 m. The leaves are dark green, elliptical, the flowers are funnel-shaped, purple, large, with a diameter of over 6 cm, with a delicate golden pattern on the upper petal. The variety is completely frost-resistant. All of the above characteristics can be attributed to our 'Anna's Platinum' variety. It is a very good, hardy variety with colorful, extremely decorative foliage. Even old, several-year-old specimens do not have shoots with reversion, which often occurs in other variegated varieties (reversion - return to the original form) .

AZALEA VISCOSUM / ATLANTICUM

A group of azaleas with relatively strong growth, which are usually distinguished by fragrant flowers. The blooming period typically occurs in May, but some varieties bloom very late in the summer (VII-VIII).

---------	--------------	--	--

Cornell Pink - *R. mucronulatum* pink **NOVELTY!**

A pink, very profusely flowering variety of rhododendron. It blooms very early, at the turn of March and April. It reaches a height of about 1.5 meters. The flowers usually appear before the leaves develop. A variety with high frost resistance. It partially sheds its leaves for the winter.

Henry's Triumph pink **FRAGRANT!** **NOVELTY!**

A new variety of azalea from Weston Nurseries. It blooms in summer and has fragrant flowers. The shrub has an upright habit and reaches a height of 1.8 m after 10 years. Frost resistant to -28°C.

Millenium - *R. viscosum* red **FRAGRANT!** **NOVELTY!**

A new variety of azalea with strongly scented flowers. It blooms in late June and early July. It grows slowly, reaching a height of 1 m after 10 years. Frost resistance to -29°C.

Pink Form - *R. arborescens* light pink **FRAGRANT!** **NOVELTY!**

An American variety from the Eastern American group. The blooming period extends into the summer, with strongly fragrant flowers. It is a slow-growing shrub, reaching 1 m in height after 10 years. Frost resistant down to -22°C.

Snowbird - *R. atlanticum* white **FRAGRANT!** **NOVELTY!**

Azalea originating from the Glendoick nursery. It blooms in May, with strongly fragrant flowers. This is a slow-growing shrub with a compact form, reaching 1 m in height after 10 years. Frost resistant down to -18°C.

Weston's Lemon Drop - *R. viscosum* yellow **FRAGRANT!** **NOVELTY!**

A variety of azalea originating from Weston Nurseries, U.S.A. It blooms in summer, with lemon-scented flowers. The shrub has an upright habit and reaches 1.8 m in height after 10 years. Frost resistant down to -28°C.

Weston's Lollipop - *R. viscosum* pink **FRAGRANT!** **NOVELTY!**

A variety of azalea originating from Weston Nurseries, U.S.A. It blooms in summer with fragrant flowers. The shrub has a dense, compact habit. After 10 years, it reaches a height of 1.5 m. Frost resistant down to -26°C.

BOTANICAL AZALEAS

Azaleodendron Govenianum purple **FRAGRANT!** **NOVELTY!**

An extremely original, unique hybrid between rhododendron and azalea. The flowers are pleasantly fragrant, purple-lavender in color, and bloom from May to April. The shrub has a dense, upright habit and grows to a height of about 1.5 m. During dormancy, it partially sheds its oldest leaves, leaving only the youngest ones at the top. It grows best in partial shade or full sun, where it flowers more profusely.

Pontic azalea (*Rh. luteum*) yellow **FRAGRANT!**

A distinctive feature of this species is the very intense, pleasant scent of its flowers. It blooms yellow in May. It grows to a height of approx. 3 m after 10 years. Easy to grow.

Canadian azalea (*Rh. canadense*) light purple

Azalea with medium-sized flowers. Its distinguishing feature is early flowering. The flowers are light purple in color, with small petals and high frost resistance. A shrub with strong growth.

AZALEAS

Knapp – Hill, Mollis, Ghent and other strongly growing azaleas.

This is a group of shrubs with fabulously colourful flowers. With their lesser requirements they settle for much worse habitat conditions. At the age of 10 years they reach the height of 1–1,5 m. Splendid enormous flowers with wavy petal edges, orange, red and pink in colour – these are the characteristics that distinguish the Knapp-Hill azaleas. The other varieties are in no doubt about the same beauty. They include shrubs with smaller but fragrant flowers or those building wonderful “pompon” inflorescence.

JAPANESE AZALEAS

This is a group of dwarf, very profusely flowering and partially evergreen shrubs. Due to their lower frost resistance, they should be protected for the winter. They bloom from early May to early June. They grow to a height of 30-60 cm.

Bred in the Czech Republic in the arboretum Pruhoňice

Symbol	Height [cm]	Container [L]	Price [EUR]

Variety	Flower color
Čertoryje (Brunella x Kroměříž) A Czech variety available on the market from 2018. Dense upright habit. Leaves are elongated, dark green turning into yellow-orange, and yellow-red in autumn. Flowers dark red up to 5,5 cm wide. The advantage is very long blooming and no fading in the sun. Blooms in early May.	red
Javoříce [Kermesinum Rose x (Veltrusy x Kleopatra)] A Czech variety of Japanese azalea with strong growth and very abundant flowering. The flowers are dark pink and fairly large.	dark-pink NOVELTY!
Kačina ^{PBR} (Kermesinum x Profesor Jeršov) Variety with medium growth, shrubs almost rounded in shape, 60 cm (height) x 65 cm (width) in 10 years. Leaves are light to medium green, in autumn they turn into orange and red shades. Flowers are rosy red, 4 cm wide. Blooming early May. Frost resistance up to -24°C.	pink-red
Kroměříž ^{PBR} (Diamant Rot x Profesor Jeršov) A variety with medium growth strength and a round habit. After 10 years, it reaches a height of 65 cm. The leaves are glossy, dark green, and turn red in autumn. The flowers are bishop's red, 4 cm wide. Flowering time is from early to mid-May. Frost resistance to -24°C.	red
Malá Skála ^{PBR} (Diamant Rot x Ledikanense) Variety with slow growth, shrubs broadly rounded in shape, 30 cm (height) and 60 cm (width) in 10 years. Leaves are glossy, medium to dark green, in autumn they turn into red shades. Flowers are light purple, 5 cm wide. Flowering time is late April to mid May. Frost resistance up to -24°C.	light purple
Salajka ^{PBR} (Čertoryje x Hluboká) Mid to strong growing semidecidual azalea with nice autumn colouring of leaves. Flowers quite big, 5,5 – 6 cm across, purplish red with conspicuous markings. Flowers waxy and stable.	purplish red
Sněžka ^{PBR} (Maischnee x Lednice) Variety with medium to strong growth, shrubs almost rounded in shape, 80 cm (height) x 100 cm (width) in 10 years. Leaves are dark green, in autumn they turn into yellow shades. Flowers are pure white, buds and young have yellow tint, 5,5 cm wide. Flowering time is early to mid May. Frost resistance up to -24°C.	white

DWARF RHODODENDRON AND IMPEDITUM

Varieties in this group are distinguished by their very slow growth, which is why they should be placed in the foreground in garden designs. They grow to a height of 30-50 cm, but some of them can reach 1 m in old age. Most of them produce small flowers in shades ranging from lilac and lilac-pink to blue. They are frost-resistant, but in very cold and snowless winters they may freeze. Therefore, it is advisable to protect them for the winter, e.g. with tree branches. They bloom from mid-May to early June.

BLUEBERRY (*Vaccinium corymbosum*)

A fruit bush with a growth height ranging from 0.6 m to 2 m, depending on the variety. The fruit is blue, sweet, sometimes slightly sour, and very tasty. Blueberries contain anthocyanins, which have natural antioxidant properties, ellagic acid, folic acid, and antioxidants. These properties of blueberries contribute to the removal of free radicals from the human body, which are the cause of lifestyle diseases, including cancer. In this respect, blueberries surpass all other fruits. These beneficial properties have led to blueberries being recognized as the fruit of the 21st century. The shrubs should be grown in acidic soil, e.g., peat or decomposed sawdust. The plants we offer are very well rooted, hardened, and strongly branched from the very base of the plant. The bushes are produced using the micro-seedling method developed in our nursery.

***All our mother microcuttings are proven to be virus-free according to laboratory examination.
 We conduct genetic comparative tests for variety genuineness.***

NEW PLANTATION BLUEBERRIES

***Plantation blueberries, sold only to professional growers after signing a license agreement.
 The minimum order for licensed varieties is 500 pieces per variety.***

BLUEBERRIES OF OLYMPUS

Symbol / Age	Height [cm]	Container [L]	Price [EUR]
Pot size (L) / price group (I)			*average exchange rate 4.20
2,5/I 2-years old	45-65	2,5	4,05
2,5/II 2-years old			3,81
5/I 3-years old	65-80	5	7,14
5/II 3-years old			6,79

Olimp blueberries are the result of breeding work carried out since 2010 at the Cieplucha Nursery. These are four new varieties of highbush blueberries. They have improved fruit and yield parameters compared to traditional varieties. The license fee is PLN 4.00. Below we present the preliminary results of comparative studies of selected blueberry genotypes named:

Athena^{PBR}	NOVELTY!
A very early-fruiting blueberry variety (similar to Duke). The fruit is tasty, medium-sized (3 g, 18 mm), crisp, with a firm skin. The clusters are very loose (easy to harvest). A fertile variety with a yield similar to the DUKE variety. The bushes have a good shape, are upright and strong.	
Demeter^{PBR}	NOVELTY!
An early-fruiting blueberry variety (ripening a few days after Duke). Fruit size M (3 g, 17.5 mm), very crisp, with exceptionally good shelf life (no deterioration in fruit parameters after 4 weeks of storage). An exceptionally high-yielding variety (50% higher yield than Duke). Fruit with low acidity – sweet taste. Bushes with good habit, upright, strong.	
Zeus^{PBR}	NOVELTY!
A medium-early, high-yielding variety from the Olympus Blueberry series, ripening several to a dozen days before Calypso. The fruit is large and very firm. It is distinguished by its light blue color and exceptionally good shelf life. The fruit is aromatic, sweet, and gathered in loose clusters. It may prove to be one of the best commercial varieties.	
Apollin^{PBR}	NOVELTY!
A late-fruiting blueberry variety (about a week after Draper). Fruit size L (3.3 g, 19 mm), with good shelf life, crisp. High-yielding variety (yield similar to Draper). Very tasty, sweet and sour fruit. Bushes with good habit, upright, strong.

Top Shelf^{PBR}

NOVELTY!

A blueberry variety with medium fruiting time (ripening time the same as Draper). Very large fruit (approx. 2.5–3.0 g, 18–20 mm), very firm, with an intense blue color and good post-harvest shelf life. A fertile variety with uniform ripening, suitable for manual and mechanical harvesting. The fruit is sweet, of high dessert quality, and very attractive for the fresh market. The bushes are upright, vigorous, and easy to grow. Recommended for warmer regions of Poland.

Valor® 'ZF08-070'

NOVELTY!

A blueberry variety with medium fruiting time (ripens a few days after Bluecrop). The fruit is large to very large (approx. 2.5 g, 18–20 mm), firm, uniform, intensely blue in color, and has good post-harvest shelf life. A very productive variety with concentrated and uniform ripening, suitable for both manual and mechanical harvesting. When fully ripe, the fruit is sweet, tasty, and attractive for the fresh market. The bushes are strong, upright, vigorous, easy to grow, and frost-resistant.

Cargo^{PBR}

NOVELTY!

A late-ripening blueberry variety (ripens over a week later than Bluecrop). Medium to large fruit (approx. 2.2–2.5 g, 16–18 mm), very firm and durable in storage (excellent post-harvest shelf life). Ideal for transport. A very fertile variety with concentrated and uniform ripening, well suited for mechanical harvesting. The fruit is tasty, sweet with a slight acidity, and has a firm texture. The bushes have an upright habit, are vigorous, and require pruning, similar to the Bluegold variety. The plants are very frost-resistant.

Last Call^{PBR}

NOVELTY!

A very late-ripening blueberry variety (ripens about a week before the Aurora variety, at a similar time to Elliott). Medium to large fruit (approx. 2.2–2.5 g, 17–19 mm), firm, durable in storage, with good post-harvest shelf life. A fertile variety with concentrated ripening, suitable for mechanical harvesting. The fruit is tasty, sweet with a hint of acidity, and aromatic. The bushes are strong, upright, healthy, and vigorous.

Variety		
Aurora^{PBR}		
Calypso^{PBR}	2,5 l	4,76
New variety of Vaccinium corymbosum. Berries mature late, similar to 'Legacy'. Fruits are big (over 2 cm wide), regular in size, slightly flattened, firm, with light blue waxy bloom and low acidity. They can be easily stored and transported. Small stem scar. One of the best varieties for a large scale production at the moment.		
Draper^{PBR}		
Huron^{PBR}		
New, valuable variety, bred by Michigan State University. Fruits are very big, hard, extremely tasty and sweet. Abundant fructification. Small scar on fruit. The color of fruit is light blue, should be picked when fully ripe. Ripe early, just after Duke variety. Crop quite long (3 weeks). Straight habit. Frost resistant variety.		
Liberty^{PBR}		

Blueberries are available in the following varieties

SOUTHERN Highbush

Variety
Biloxi
Southern highbush variety. Plants may freeze in Polish climate without covering. Fruits big, hard, pretty sweet. Fruits ripens early, gradually.
O'Neal
Southern highbush variety, ripe very early. Fruits are big, hard, sweet and pretty juicy. Straight habit. Tolerate high temperature and drought. Plants may freeze in Polish climate.
Ozark Blue
Southern highbush variety with high frost resistance. Ripening late. Wide and branchy habit. Fruits are big, sweet and very tasty. Very fertile variety.
Star
NOVELTY!
An early variety of American blueberry. Medium to large fruit (approx. 2.8-3.2 g), intensely blue, firm, with good flavor and attractive appearance. They have a characteristic star mark where the calyx was. The fruit ripens in the first half of July, allowing for an early start to the season. A fertile variety with uniform and abundant yields. The bushes are upright, medium-strong, and branch well. The fruit is excellent for both fresh consumption and processing.

PATIO BLUEBERRIES

(*Vaccinium angustifolium* x *Vaccinium corymbosum*)

Varieties produced under license: Aino^{PBR}, Alvar^{PBR}, Arto^{PBR}, Jorma^{PBR}

The most important feature of Patio Blueberries is high frost resistance - they can be easily grown on terraces and balconies. These plants can survive winter in a container if properly protected, however it is recommended to keep them in a cold garage or a basement. Very abundant fructification and compact form - grow up to about 1,5 m high are the unique properties of Patio Blueberries. The size of fruits differs depending on the variety and ranges from 1 to 1,5 cm. The material in the varieties Aino, Alvar, Arto, Jorma is offered exclusively and covered by MTT Laukaa breeder's license. The price includes a license fee.

Variety
Aino^{PBR} Half-high blueberry with high frost resistance. Habit thick, compact. Fruits with a mild, sweet taste, aromatic, rich in anthocyanins. Very fertile. Recommended for amateur planting.
Alvar^{PBR} Half-high blueberry with high frost resistance. Early fructification period. Habit of shrub dense, low. Fruits with a mild, sweet taste, very tasty, rich in anthocyanins. Promising novelty recommended for amateur planting.
Arto^{PBR} Half-high blueberry with high frost resistance. Grows fast, similar to highbush blueberry. Fruits with intense sweet taste, slightly sour, aromatic, rich in anthocyanins. Recommended for amateur planting.
Jorma^{PBR} Half-high blueberry with high frost resistance. Yield 2-3 times in a year. Habit erect, growth strong. Fruits with a mild, sweet and sour taste, rich in anthocyanins. Recommended for cultivation by amateurs.

OTHER FRUIT PLANTS

SERVICEBERRY

(*Amelanchier alnifolia*)

Serviceberry is a kind of fruit-bearing shrub belonging to the family Rosaceae, naturally growing in the areas of North America. Due to the taste and health qualities of the fruits as well as the decorative look of the shrubs throughout the year, they are very popular in Canada and are becoming a promising novelty in European countries. Fruits are mild in taste, sweet, purple and dark blue. It's fruiting from mid-June to mid-July. Habit loose, upright. Reaches about 2-5m in height depending on variety. The shrub is completely resistant to frost up to -40°C

CORNELIAN CHERRY

(*Cornus mas*)

The edible dogwood is a fruit-bearing and ornamental shrub that occurs naturally in southeastern Europe and southeastern Asia. It bears fruit in August. The fruit is very tasty, red, about 2 cm long, and shaped like olives. It can be eaten raw or dried, and is also ideal for preserves. It has a dense, upright habit. It reaches a height of about 3-4 m. It requires well-drained, humus-rich soil with a slightly acidic to neutral pH.

* Edible dogwood available in fall 2025

Variety

Amaranta®

A raspberry variety bred and patented in Italy by So.agr. Sant'Orsola. Shoots are semi-upright, and the plant's habit allows for very easy and quick harvesting. This variety is highly productive. It bears fruit on both one-year-old and two-year-old shoots. On two-year-old shoots in the spring at the beginning of the season, and on one-year-old shoots in the fall. The fruits are very tasty, with an elongated conical shape, light red in color, and very uniform. They have good durability and resistance to processing.

AMBRA BT Rassix^{PBR}

NOVELTY!

A variety of Italian origin, bearing fruit on annual shoots - from mid-September until the first frosts. The fruits are orange in color and conical in shape. Partial fruiting is also observed on last year's shoots in June. It is one of the tastiest orange varieties bred to date, with a sweet taste and aromatic scent. It is characterized by strong, upright growth up to 180 cm. The shoots are dark red in color.

Black Jewel

NOVELTY!

A raspberry with outstanding taste properties and one of the earliest ripening dates. The intensely dark black fruits ripen from the beginning of July. They are large, weighing 2.5-3 g. Their unique aroma makes them ideal as dessert fruits. They are also suitable for preserves - jams, juices, and preserves. The shoots are strong and stiff, reaching about 2 m in length and branching very well. The variety is fully frost-resistant and self-pollinating. It bears fruit on two-year-old shoots.

Clarita^{PBR}

Licence variety of Italian-bred Berryplant. This selection bears fruit on one-year and two-year shots (twice a year) - at spring on two-year shots, at autumn on one-year shots. Straight habit with strong stems. Characterized by high frost resistance and even growth. Big fruits, light red, very tasty and long-lasting. Recommended for commercial cultivation. Resistant to vermin and diseases.

Gleen Dee®

A Scottish raspberry variety with a classic truncated conical shape and light red color. It is easy to harvest, has good durability, and is thornless. It bears fruit in the spring, in June, on two-year-old shoots. Straight habit with easy-to-maintain shoots. The lateral shoots are long and strong. Average ripening period, lasting about 4-5 weeks. The fruits are large, with a sweet, slightly tangy taste.

Golden Queen

NOVELTY!

A very easy-to-grow variety with medium-sized, yellow, tasty, and sweet fruits. The ripening period extends from July to September. The shoots grow upward and are covered with numerous soft spines. The variety is very resistant to frost and fungal diseases.

HIMBO TOP® 'Rafzaqu'

A Swiss red raspberry variety ripening mid-season. It is very vigorous and productive. It bears fruit on both one-year-old and two-year-old shoots (twice a year) - in the spring at the beginning of the season on two-year-old shoots and in the fall on one-year-old shoots. The fruits are large, glossy, light red (with no tendency to darken), and range from medium-firm to firm. Suitable for fresh consumption. The shoots are strong and upright, making harvesting easy. The flavor is intense and refreshing, with a high sugar content and a delicate acidic note. Resistant to pests.

Magda^{PBR}

This variety protected by breeders license which belongs to Italian producer, Berryplant. Compact plant thanks to it is suitable for growing in pots. Bears fruit on one year shoots. Fruits are very sweet and tasty. Highly recommended for amateur plantings.

PARSIFAL BT Rifiorente^{PBR}

NOVELTY!

A variety straight from sunny Italy. It bears fruit on two-year-old shoots from mid-July. The fruit is conical in shape and medium in size. It has a light but very attractive bright red color and a distinctive, sweet taste. It grows to a height of about 160 cm. A special feature of this variety is that the fruit stays on the stems very well, while at the same time being easy to harvest by hand and mechanically.

BLUE HONEYSUCKLE

(Lonicera caerulea var. kamtschatica)

The Kamchatka berry is a fruit bush native to Northeast Asia, which is enjoying growing popularity due to its very early fruiting and health and taste qualities, which surpass many fruits known on the market. It is characterized by high fertility - 2-3 kg of fruit can be obtained from a single shrub. For good fruiting, at least two varieties should be planted next to each other. The first fruits can be eaten as early as May! This species produces blue, oblong, sweet-and-sour fruits 2-4 cm long, covered with a waxy coating. The bush is highly resistant to drought and extremely frost-resistant - it can withstand frosts of over 40 degrees. Thanks to this, it can be grown throughout Poland.

HYDRANGEA MACROPHYLLA DIVA FIORE 'Saxdifioros'^{PBR}

- They bloom on annual shoots.
- **They are winterhardy - they bloom every year in Polish climatic conditions.**
- They retain their dense habit and do not spread out.
- **They bloom from June to November, constantly producing new flowers.**
- **They bloom every year, without fail.**
- **They are resistant to diseases and easy to grow.**
- They can be grown in the garden and as a patio plant.
- They come in shades of pink, purple, and blue.

The color of garden hydrangea flowers depends on the pH of the soil:

- Soil with a pH of 5 or below - blue color
- Soil with a pH of 6 or above - pink color
- Neutral pH - purple color

After planting, hydrangeas may change color depending on the type of soil they are planted in.

To acidify the soil, ammonium sulfate or aluminum sulfate can be used, and to increase alkalinity, lime can be used.

I. General provisions.**§ 1.**

1. These General Commercial Terms and Conditions (hereinafter referred to as "**GTCs**") set out the principles of sales, deliveries, contracts, offers and agreements conducted by the Seller and form an integral part of the contracts concluded with the Purchasers. They shall apply as soon as the Seller confirms the Purchaser's order or issues an invoice, to which the Seller attaches the content of the GTCs.
2. Any amendments to these terms and conditions shall be made in writing in order to be valid.

II. Definitions**§ 2.**

The following terms used in the GTCs shall be understood to mean:

"Seller" - the entities indicated in the Order Confirmation as a party to the transaction, acting jointly or separately:

- a. **Anna Cieplucha-Kowalska Nursery Farm;**
- b. **Cieplucha Nursery Farm - Krzysztof Kowalski;**
- c. **Jan Cieplucha Nursery Farm;**
- d. **Krzysztof Kowalski Horticulture;**

"Purchaser" - a natural person, an organisational unit without legal personality which the Act grants legal capacity or a legal person who has concluded a Contract with the Seller or has placed an Order with the Seller;

"Order" - a document originating from the Purchaser in written, electronic, telephonic or documentary form;

"Order Confirmation" - a document originating from the Seller in written or electronic form;

"Contract" - contract of sale, delivery, contracting or any other contract concluded by the Seller with the Purchaser in accordance with the provisions of the Civil Code;

"Price List" - a list of goods published on the Seller's website or displayed at the Seller's premises, together with their unit price,

III. Offers and conclusion of Contracts**§ 3.**

1. The Seller's offer in the form of content presented on the Seller's websites, as well as printed materials of informative character regarding the Seller's business activity, in particular announcements, advertisements, price lists and other information about the Seller's enterprise are not an offer within the meaning of Articles 66 and 66¹ of the Civil Code. This content may only relate to goods currently offered by the Seller.
2. The offer is valid while stocks last.

IV. Conditions for placing orders**§ 4.**

1. In order to conclude the Contract, the Purchaser shall submit an Order, upon receipt of which the Seller shall confirm the Order. The Contract is concluded on the terms and conditions described in the GTC when the Seller sends the Order Confirmation to the Purchaser. Any objections to the contents sent in the Order Confirmation shall be notified by the Purchaser without delay.
2. The sending of the Order or other arrangements by the Purchaser in written electronic or documentary form (e.g. e-mail, letter, scan) shall be deemed to be knowledge and acceptance of the Seller's GTCs by the Purchaser and shall be deemed binding by the Seller.
3. In the Order, the Purchaser is obliged to indicate at least:
 - a. the type and quantity of goods ordered,
 - b. the Purchaser's e-mail address for sending the Order Confirmation, unless it is to be delivered to the Purchaser at the Seller's retail outlet,
 - c. the method of collection or delivery of the goods ordered,
 - d. the method of payment of the price.
4. The Order Confirmation shall contain at least:
 - a. the quantity and type of goods ordered,
 - b. the unit prices of the goods valid on the date of the Order Confirmation,
 - c. the total value of the Order,
 - d. the approximate time of collection or delivery of the goods,
 - e. information on the amount and date of payment of the deposit (if provided for),
 - f. information on the deadline for payment of the value of the Order.
5. The GTC is posted on the Seller's website. The Seller shall provide the Purchaser with these GTCs together with the Order Confirmation and the sales document.

6. For the avoidance of doubt, it is stipulated that in the event of a discrepancy between the wording of the Order and the Order Confirmation, the indications in the Order Confirmation shall be binding on the parties.
7. The parties expressly exclude the application of any general terms and conditions or model contracts used in the trade by the Purchaser.
8. Any customer placing orders for a total amount exceeding:
 - PLN 30,000.00 for nursery stock,
 - PLN 10 000,00 for blueberries
 undertakes to pay a deposit of 20% of the value of the goods ordered. The deposit shall be payable in cash or to the bank account specified by the Seller on the Order form within 7 working days of effective delivery of the Order Confirmation.
9. Failure to pay the Deposit by the aforementioned deadline shall result in cancellation of the Sales Contract and no guarantee of availability of the ordered material.
10. The Deposit paid shall be set off against the sale price. In the event of cancellation of the Order or non-performance of the Contract by the Purchaser (non-payment for the ordered goods), the Deposit is non-refundable (art. 394 of the Civil Code), unless the Seller has agreed to the Purchaser's cancellation of the ordered goods.
11. Upon duly motivated request, the deadline for payment of the deposit may be extended by the Seller. In such case, the effect referred to in § 4.9 shall not take place and the validity of the offer included in the Order Confirmation shall be extended accordingly until the expiry of the additional period for payment of the deposit.
12. In the event of non-performance of the Contract by one of the parties, the other party may, without setting a grace period, withdraw from the Contract and retain the Deposit received, or, if it has given it itself, may demand its return in the same amount without interest.
13. The Seller has the right to withdraw from the Contract without being obliged to state a reason (art. 395 § 1 of the Civil Code). The declaration of withdrawal from the Contract shall be submitted to the Purchaser in written or documentary form under pain of nullity. In such a case, the Contract shall be deemed not to have been concluded and the Seller shall return to the Purchaser the Deposit paid by the Purchaser. If the Seller exercises the aforementioned right, the obligation to pay twice the amount of the deposit is excluded.

§ 5.

1. Once the Contract has been concluded, any change to the quantity or type of goods ordered shall require the Seller's consent in writing or by e-mail under pain of nullity.
2. A change in the quantity or type of goods ordered without the required consent of the Seller shall not have the effect of an amendment to the contract, i.e. the Purchaser is obliged to take delivery of the entire order and pay the price.
3. In the event that the Seller agrees to the change referred to in paragraph 1, an amendment to the Contract shall take place. The deposit paid shall be credited in full towards the price of the changed subject of the Contract and shall not be reduced accordingly.
4. If the goods of a given type are out of stock and consequently unavailable, the Seller shall replace the missing types of goods with others of similar parameters in agreement with the Purchaser. Agreement in this respect shall be made in documentary form (e-mail, text message).
5. Failure to collect the goods by the agreed date and non-payment shall entitle the Seller, at his discretion, to demand payment and collection of the goods by the Purchaser or to exercise the rights provided for in the GTC, i.e. to perform the contract.

V. Prices**§ 6.**

1. The prices for the goods sold are shown in the Price List.
2. The prices for adult plants listed in the Price List and Order Confirmation are net prices (exclusive of VAT) in EUR currency. Prices are for reference only. Prices in foreign currencies will be converted based on the average exchange rate of the National Bank of Poland from the business day preceding the invoice issuance.
3. The Seller may carry out and cancel promotional campaigns.
4. The Seller reserves the right to change the Price List at any time.
5. The prices of the goods stated in the Order Confirmation are valid as of the date of the Order Confirmation. The Seller shall be entitled to declare to the Purchaser a change in the price specified in the Order Confirmation by the monthly price index of goods and services, i.e. mdm (month of Order Confirmation = 100) announced by the President of the Central

Statistical Office. The revised price is effective from the time of the Seller's declaration. The Seller shall be entitled to make the declaration described above before the deadline for payment by the Purchaser.

6. The prices listed in the Price List do not include the costs of delivery in the case of sales outside the Republic of Poland. The Purchaser is informed of these costs in the Order Confirmation.
7. The Price List is valid until a new Price List is issued.
8. Wholesale prices apply when adult nursery stock is purchased for a minimum of PLN 1,000.00 and a minimum of 5 units of one variety.
9. For young material, a minimum of 120 units per variety (M40 multiplat). The minimum order quantity for plants in P9 and C1 containers is 500 plants per variety for bulk purchase. For purchases of 100-500 units, the retail price applies. Orders of less than 100 plants in P9 and C1 containers will not be fulfilled.
10. Purchasers issuing VAT RR invoices receive a proof of delivery. The prices stated in the delivery note are net prices, to which the Purchaser shall add VAT (in accordance with the Value Added Tax Act of 11 March 2004).

VI. Discounts

§ 7.

1. When purchasing adult nursery stock, excluding plants in C90 containers and larger, the Purchaser is entitled to a discount, calculated on the basis of the total value of goods purchased from the Seller by the given Purchaser in the current year or the previous year in relation to the date of the Contract, depending on which is higher. The value of the current year's and previous year's purchases are not added together for the purpose of granting a discount.
2. The amount of the discount is:
 - 5%** - with a total value of the purchased goods from the current or previous year in the range of **PLN 2,000.00 - 5,000.00**;
 - 10%** - with the total value of goods purchased from the current or previous year in the range of **more than PLN 5,000.00 to PLN 10,000**;
 - 15%** - with the total value of goods purchased from the current or previous year in **excess of PLN 10,000.00**.
3. In addition, the Purchaser entitled to the discounts referred to in paragraph 2 is eligible for a discount in the amount of:
 - 2%** - for payment in cash or prepayment by bank transfer

VII. Method of payment

§ 8.

1. For sales within Poland, the following forms of payment apply:
 - a. in cash upon receipt of the goods,
 - b. by bank transfer to the Seller's account within 30 days from the date of the bill or invoice, up to the amount of the trade credit granted by the Seller. Trade credit is granted at the Seller's discretion, only to Purchasers who have not been in arrears with their payments for more than 30 days in the last 3 years (so-called creditworthiness),
 - c. Purchasers who are subject to collection are obliged to pay for the ordered goods only in cash or by prepayment.
2. In the case of the first Contract concluded with the Purchaser, payment in cash, made at the latest upon receipt of the goods, or prepayment by transfer of 100% of the value of the ordered goods to the Seller's bank account shall apply, unless the Seller has agreed to defer payment.
3. In the case of sales outside of the Republic of Poland, payment of the price should be made in full prior to the execution of the order, by bank transfer to the Seller's account.
4. The Purchaser agrees that the Seller may use electronic invoices in settlements within the meaning of the Act of 11 March 2004 on Value Added Tax.
5. In the event of late payment, the Seller shall be entitled to charge statutory interest for late payment.
6. Failure to comply with the terms of payment or the occurrence of circumstances that cast doubt on the solvency and reliability of the Purchaser shall result in the immediate maturity of all amounts due. In this case, the Seller may withdraw from the performance of contracts not yet fulfilled.
7. Purchasers wishing to obtain a delayed payment shall submit the following documents for inspection:
 - identity card,
 - a current extract from the register of economic activities (if they carry out activities on the basis of an entry in the register of economic activities,
 - a document showing the current address details of the Purchaser.
8. Purchasers conducting business in the form of a commercial company, together with the application for deferment of payment, present to the Seller for inspection a copy of the Register of Entrepreneurs of the National Court Register, Tax Identification Number (NIP), Business

Identification Number (REGON), and in the event that the entry in the register is not up-to-date, documents containing up-to-date data.

VIII. Collection of goods and delivery

§ 9.

1. Delivery shall be deemed to have taken place when the goods leave the Seller's premises or are loaded onto the Purchaser's means of transport or, in the case of delivery by means of transport belonging to the Seller, at the time of unloading.
2. The Purchaser shall collect the goods himself or use the transport offered by the Seller.
3. Once the goods have been loaded, the risk of damage to or loss of the goods shall pass to the Purchaser.
4. With the arrival of the calendar Spring, the Seller has the right to deliver, and Buyer is obliged to collect the ordered goods within the deadline set by the Seller.
5. Contractually agreed delivery dates are approximate.
6. In case the Seller and the Buyer agree on a pickup date, the plants are prepared, and the Buyer postpones the pickup date by more than a week the Seller will charge the Buyer for the cost of unpacking the order and repacking it at 5% of the order value, as well as the cost of storing the order at 5% of the order value for each week of storage.
7. The storage costs in the above amount may also be added in case the Buyer refuses to pick up the order within the deadline set by the Seller.
8. In the event of an order for goods with delivery, the quantity of which does not result in full occupancy of the delivery vehicle, the Seller shall combine orders from different Purchasers and send them together when full occupancy of the delivery vehicle is reached, which may result in a delay in delivery.
9. Transport insurance is only taken out at the express request of the Purchaser and at the Purchaser's expense.
10. The Purchaser is obliged to check the conformity of the goods with the order immediately upon receipt. He is obliged to check in particular: the condition of the consignment and the quality, quantity and assortment of the delivered goods, and to draw up a product damage report upon receipt of the goods to the carrier, and immediately (i.e. within 7 days at the latest) notify the Seller of any objections in this respect. Failure to lodge objections within this period shall be tantamount with acceptance of the goods without reservation.
11. Each acceptance of goods must be signed for by the Purchaser. If the Purchaser does not collect the goods personally from the Seller, he must provide details and authorise in writing or in documentary form (e.g. by e-mail) a person/company to collect the goods on his behalf.
12. If the transport of the goods is organised by the Purchaser, the Purchaser must send a forwarding authorisation/order by e-mail. The authorisation must include the details of the forwarding company, the name of the driver or other authorised person collecting the goods, the registration number of the vehicle and trailer, the date of loading, the place and date of unloading of the goods.

IX. Reservation of title

§ 10.

1. The Seller reserves ownership of the object of sale until the Purchaser has paid the price.
2. From the moment the goods are handed over, the Purchaser is at risk of losing or damaging the object of sale.
3. The Seller does not lose ownership of the reserved goods by the fact that the Purchaser will heel or plant the delivered plants (goods) on his own or a third party's property after the sale. The reserved goods shall be stored, heeled or planted separately from other plants and marked in such a way that they are recognisable as coming from the Seller.
4. The Purchaser is obliged to take care of the reserved goods free of charge. These include, in particular, correct storage, planting, fertilisation and irrigation.
5. If the Purchaser sells the object of sale reserved in paragraph 1 after processing, combining or mixing it with other goods not belonging to the Seller, the Seller shall be entitled to a share in the co-ownership of the new item in the ratio of the value of the reserved goods to the remaining goods processed at the time of processing, combining or mixing (Article 193 § 1 of the Civil Code).
6. If the price is not paid within the agreed period, the Seller shall have the right to demand immediate release of the object of sale.
7. If the object of sale is taken away from the Purchaser (due to non-payment of the price), the Seller may claim appropriate remuneration for the reduction in value or damage.

X. Performance of the Contract

§ 11.

1. If the Purchaser who has paid the price has not taken delivery of the goods by the agreed date, the Seller may sell the goods ordered by the

- Purchaser, but shall first set an additional time limit for the Purchaser to take delivery, unless setting a time limit is not possible or the goods are in danger of deterioration or would otherwise be at risk of damage. The Seller is obliged to immediately notify the Purchaser of the sale (Art. 551 § 2 of the Civil Code).
2. In the event of the Purchaser's delay in payment or the Purchaser's delay in accepting the subject matter of the Contract, the Seller shall be entitled to withdraw from the Contract provided that a prior request for payment or acceptance of the subject matter of the Contract has been issued, reserving at least 3 days for the fulfilment of the obligation. In the event that a declaration of withdrawal is made in accordance with this paragraph, the Seller shall retain the deposit paid by the Purchaser, which shall not limit the Seller's right to claim damages on general terms.
 3. The Purchaser is obliged to pay compensation for loading costs in the amount of 5% of the order value, if he has made a declaration of withdrawal from the contract after the Seller has loaded the ordered goods and the amount of the deposit paid has not covered the loading costs.
 4. The Purchaser who has ordered goods with delivery, in case he has made a declaration of withdrawal from the contract, after the Seller has delivered the ordered goods, shall be obliged to pay compensation for the loading costs referred to in para. 3 and compensation for the costs of delivery of the goods to the Purchaser in the amount of 5% of the order value.
 5. The Purchaser shall be obliged to pay compensation for the lack of use of the storage space by the Seller in a situation where the goods have not been collected despite the agreed time limit for the collection of the ordered goods. A contractual penalty shall be charged after the expiry of 7 days from the agreed deadline for acceptance of the order in the amount of PLN 3.00 per CC trolley or box pallet for each day of delay in acceptance of the order.

XI. Models and dimensions

§ 12.

1. Merchandise models show average properties. The dimensions of the goods given are approximate. Deviations from the presented models are permissible.

XII. Guarantee, liability and complaints

§ 13.

1. The Seller provides a quality guarantee, i.e. he is responsible for the health and viability of the plants at the time of delivery.
2. The Seller's liability towards the Purchaser to the fullest extent permitted by mandatory legal provisions is excluded with regard to:
 - a. any defects or damage resulting, however indirect, from the manner in which the plants have been cultivated or cared for after delivery (e.g. poorly chosen location, inadequate watering, poor choice of substrate), manifesting itself in particular in the failure of the plant to take root, deterioration of its growth level or fruiting;
 - b. the consequences of using plant protection products and herbicides;
 - c. the lost profits of the Purchaser;
 - d. damage resulting, even indirectly, from modifications, mutations or other genetic changes in the plants, which may occur spontaneously, independently of the Seller's actions and are not the Seller's fault;
 - e. damage caused by adverse weather conditions such as frost, drought, hail, flooding and others.
3. The Seller does not guarantee the yield level of fruiting plants, as it is affected by factors beyond the Seller's control.
4. The Seller is not responsible for the occurrence of diseases, pests or other pathogens at the Purchaser.
5. The Seller's liability towards the Purchaser shall be limited solely to damage caused by the Seller through intentional fault and shall in each case be limited to the price of the Contract subject to which the Purchaser's claim is related.
6. The Seller is relieved of liability if the Purchaser was aware of the defect at the time of delivery, as well as if the Purchaser discarded or disposed of the goods.
7. As soon as the goods are resold by the Purchaser, the Purchaser loses the right to make a claim against the Seller and the Seller is released from liability for the sold goods. The lodging of a complaint does not invalidate acceptance or the obligation to pay for the purchased goods.
8. The Seller's warranty liability is excluded. This provision shall not apply if the Customer is a Consumer.

§14.

1. The Seller shall not be liable for non-performance or undue performance of the Contract caused by an event constituting force majeure, understood as an external condition beyond the control of the Parties. The Parties consider force majeure to be, in particular:

- a. natural disasters and other acts of God, including but not limited to: drought, flood, fire, earthquake, extreme cold or heat, hail, heavy rain or snow, storm, tornado, landslide;
 - b. disruption of collective life resulting from hostilities, internal disturbances or strikes,
 - c. occurrence of an epidemic;
 - d. acts of state authority that make it highly difficult or impossible to carry out commercial activities, such as the introduction of a state of epidemics or a state of epidemic emergency, a state of war, a state of emergency.
2. If, as a result of the force majeure referred to in section 1, the performance of the Contract becomes impossible or significantly hindered, the Seller shall be entitled to terminate the Contract within 60 days of the occurrence of the circumstance preventing or hindering the performance of the Contract, which shall not entail any claims for damages on the part of the Purchaser. In such a situation, the Purchaser shall be refunded the deposit actually paid.

§ 15.

1. Any defects in the goods sold must be claimed immediately, but no later than 7 days after delivery. Notice of defects must be given to the Seller in writing, enclosing photo documentation.
2. Plants may have natural discolouration / browning not exceeding 10% of the leaf area, which is not a disease symptom but the natural physiological appearance of healthy plants. On the underside of the leaves, there may be natural suberization, which is a physiological feature, especially present on old leaves. Plants with such characteristics are considered to be full-fledged.
3. Healthy plants are plants that are free of diseases and pests that are subject to compulsory control in the EU.
4. If a complaint is accepted by the Seller, the Purchaser has the right, at his/her own choice, to demand the replacement of the item with a defect-free item or another item at the same price or, if this demand cannot be met, a refund of the price paid.
5. When exercising the rights of complaint, the Purchaser should deliver the item to the Seller's registered office. If the Seller accepts the complaint, he will reimburse the Purchaser for the shipping costs.
6. It is not permissible for the Purchaser to accept the goods with "reservations".
7. Quantitative acceptance of nursery material involves the Buyer verifying whether the delivery contains all the ordered plants in accordance with the sales document (invoice, receipt, specification, etc.). Quantitative collection of plants is carried out at the moment of delivery in the presence of the driver. In case of discrepancies, You should immediately report it to the driver, who will write out a Complaint Protocol. Quantity discrepancies reported after delivery will not be considered.

XIII. Final provisions

§ 16.

1. The law applicable to these GTCs and the concluded Agreements shall be the law of Poland.
2. The place of performance is Konstancin Łódzki or Rzeszów, municipality of Rymań.
3. In the case of translation, the Polish version is binding in any disputes.
4. The precedence of the Polish language version also applies to the drafting of agreements, contracts and orders, unless the parties agree otherwise.

§ 17.

Should any provision of the Contract or the GTCs prove to be invalid, the remaining provisions shall remain in force. The Parties in such a case undertake to immediately replace the invalid provision with a valid provision that comes closest to the economic purpose of the provision declared invalid.

§ 18.

The Parties shall endeavour to resolve any disputes that arise amicably. In the event of disagreement, the competent court for disputes covered by the GTCs shall be the court having jurisdiction over the Seller's registered office.

§ 19.

The GTCs are effective as of 04.04.2024.

1. With the arrival of the calendar spring, the Seller has the right to deliver, and the Buyer is obliged to collect the ordered goods within the deadline set by the Seller.
